

As a Senior Business Architect and Performance Management Specialist, I have performed the KPI targeting and performance alignment for the **Ad Personam Pricing** process.

In the luxury fashion context, the value chain must balance extreme **Precision** (to ensure the "Ad Personam" promise of unique, tailored products) with **Responsiveness** (fulfilling the customer expectation of high efficiency). The following KPIs are selected to transform your BPMN-to-APQC mapping into a measurable, value-driven framework.

1. Activity-Level KPI Targeting

The table below identifies the primary KPI for each activity, applying the **Correction Suggestions** from your mapping table to ensure alignment with APQC PCF 7.4 Category 3.0.

BPMN Activity Name	Mapped APQC PCF Activity/Processes	Corrected PCF ID	Activity-Level KPI	Metric Definition
Request TBA	Receive Request For Proposal (RFP)/Request For Quote (RFQ)	11781	Intake Cycle Time	Total time elapsed from the initial customer inquiry until the request is logged and categorized in the system.
Request Internal Analysis	Review RFP/RFQ request	11782	Categorization Accuracy	% of Ad-Personam requests correctly assigned to the relevant Financial Controller or Specialist on the first attempt.
Perform Internal Analysis	Understand customer	11785	Requirement Completeness	A quality score (1-10) assessing if

	business and requirements		Score	all "Ad Personam" customization variables (region, materials, etc.) are captured before analysis.
Control Feasibility	Validate with strategy/business plans	11784	Strategic Alignment Rate	% of custom requests that pass the luxury brand "brand-consistency" and feasibility filters without requiring redesign.
Control Custom Details	Refine customer requirements	11780	Requirement Stability	Number of changes made to the custom specifications after the initial analysis phase has started.
Check Time Schedules	Develop pricing and scheduling estimates	11788	Schedule Precision	Variance between the estimated production lead time and the actual available production capacity at the time of the quote.
Analyze Costs	Develop pricing and scheduling	11788	Cost Estimation Accuracy	The absolute percentage difference

	estimates			between the estimated cost of the custom product and the actual manufacturing cost.
Monitor Production	Conduct profitability analysis	11789	Projected Gross Margin %	Estimated profit margin of the specific "Ad Personam" item after accounting for all custom labor and material overheads.
Elaborate Proposal	Develop solution and delivery approach	20015	Proposal Development Cycle Time	Total time taken to transform technical costs and schedules into a formal customer-facing luxury proposal.
Assess Proposal	Manage internal reviews	20016	Internal Review Efficiency	Number of internal "re-works" or corrections required by the Chief of Finance Controlling before the proposal is approved.

Reformulate Pricing	Revise bid/proposal/quote	20018	Revision Rate	Percentage of proposals that require a price reformulation due to internal error or missed feasibility constraints.
Update Pricing in SAP	Communicate and implement price changes	11497	System Integration Speed	Time elapsed between the final price approval and the price becoming active/visible in the SAP inbound interface.
Send Product	Submit/present bid/proposal/quote to customer	11790	Proposal Win Rate (Hit Rate)	% of Ad Personam proposals accepted by the customer (reflecting the success of the tailored pricing strategy).

2. End-to-End (Cross-Activity) KPI Synthesis

To measure the overall health of the value chain, the following **Macro-KPIs** are recommended:

- **End-to-End Response Time (E2E Efficiency):** Total cycle time from "Request TBA" to "Send Product" (Proposal Submission). This directly measures the "Efficiency in terms of response time" expected by luxury consumers.
- **First-Time-Right Proposal Rate (E2E Quality):** The percentage of proposals that are accepted by the customer without any requested changes to pricing or specifications.
- **Ad-Personam Value Realization (E2E Profitability):** The average margin premium

achieved on "Ad Personam" products compared to standard retail collection items.

3. Strategic Alignment: The "Ad-Personam" Context

In alignment with the **Process Profile**, these KPIs emphasize "**Cure**" and **Attention** over volume:

- **Quality over Quantity:** KPIs for activities 11785 and 11780 focus on the *completeness* and *stability* of requirements. In luxury, asking the customer for more details later is considered a failure in "full attention".
- **Responsiveness as Luxury:** While the customer does not expect an "economic" (cheap) proposal, they demand efficiency in the *process*. Therefore, cycle time KPIs are placed at critical transition points (11781, 20015, 11497).
- **Financial Integrity:** As the process owner is the **Chief of Finance Controlling**, the inclusion of Profitability Analysis (11789) ensures that "unique luxury" does not come at the expense of sustainable margins.
