

As an expert BPM Analyst and Camunda Certified Consultant, I have analyzed the BPMN diagram `running_example_for_granularity.bpmn` provided in your Google Drive.

Based on the [Camunda Best Practices for BPMN Naming](#), the following improvements are proposed to ensure consistency, clarity, and adherence to the "Verb + Object" rule for activities and "Object + Past Participle" rule for events.

BPMN Element Naming Analysis and Optimization

Element Type	Original Name	Optimized Name	Rationale (Based on Camunda Guidelines)
Task	Request tba	Request TBA	Verb + Object. Capitalized "TBA" as an acronym for professionalism.
Task	Internal Analysis requested	Request Internal Analysis	Verb + Object. The original was passive; activities should describe a clear action.
Task	Elaboration of Proposal	Elaborate Proposal	Verb + Object. Removes unnecessary prepositions ("of").
Task	Assessment of Proposal	Assess Proposal	Verb + Object. Standardizes the action-oriented naming.
Task	Reformulation of	Reformulate Pricing	Verb + Object. Focuses on the direct

	Pricing		action.
Task	Update of pricing in SAP	Update Pricing in SAP	Verb + Object. Short and action-oriented.
Send Task	Send Luxury Product to Customer	Send Product	Verb + Object. Keep it concise; the destination (Customer) is often clear from message flows.
Subprocess	Internal Analysis	Perform Internal Analysis	Verb + Object. Subprocesses follow the same naming convention as tasks.
Task	Feasibility Control	Control Feasibility	Verb + Object. Ensures the label starts with an active verb.
Task	Ad personam deatails to be controlled	Control Custom Details	Verb + Object. Corrects the typo ("deatails") and simplifies the object.
Task	Time schedules checked	Check Time Schedules	Verb + Object. Moves from passive to active voice.

Task	Cost Analysis	Analyze Costs	Verb + Object. Converts a noun phrase into an action.
Task	Monitoring of Production	Monitor Production	Verb + Object. Removes nominalization ("Monitoring").
Start Event	Accept request for ad-personam product	Request Received	Object + Past Participle. Describes the state/event that triggers the process.
Timer Event	2 working days	2 Working Days	Duration. Describes the condition or duration of the wait.
Throw Event	Apologies to customer	Apology Sent	Object + Past Participle. Throw events should indicate the action was completed.
Timer Event	3 working days	3 Working Days	Duration. Consistent with timer event best practices.
Catch Event	Analysis results	Results Received	Object + Past Participle. Catch events describe what

			has been received.
Throw Event	Send Notification to Retailer	Retailer Notified	Object + Past Participle. Describes the outcome of the message throw.
End Event	Process Ending	Process Ended	Object + Past Participle. Describes the final state of the process instance.
Start Event	Start of Analysis	Analysis Started	Object + Past Participle. Standard for subprocess start events.
End Event	Finish Internal Analysis	Analysis Finished	Object + Past Participle. Standard for subprocess end events.
XOR Gateway	Analysis done?	Analysis Done?	Question Format. XOR gateways should ask a question to clarify divergence.
XOR Gateway	Is proposal accepted ?	Proposal Accepted?	Question Format. Removes the leading "Is" for a cleaner, direct question.
